

Questions about Window Energy Performance?

NFRC has the Answers

The National Fenestration Rating Council (NFRC) rates the energy performance of windows, doors, and skylights. These ratings can be a valuable tool, much like the miles-per-gallon sticker on a new car, because they can help you to:

- * Compare different products on an apples-to-apples basis.
- * Verify that a product will perform as the manufacturer claims.
- * Make an informed choice about an expensive product that will stay in your home for many years.

A Source You Can Trust

NFRC ratings are fair, accurate, and credible because the rating system is independent – manufacturers have no say over how their products are rated. That's why the federal government and energy codes in many states and local jurisdictions encourage homeowners (and builders and contractors too) to purchase only NFRC-rated products.

This information is brought to you by:

The color, frame, price, warranty, and a dozen other things are up to you. But when it comes to energy performance, NFRC can be a powerful partner as you search for the perfect window, door, or skylight for your home.

A Valuable Online Resource

One way to find NFRC-rated products is to look for the NFRC label (see back for more information).

Since you can't always see the label on products sold in stores, NFRC also makes its ratings available on its website at www.WindowRatings.org. There you can:

- * Search the NFRC database to find ratings for the products you're thinking about buying.
- * Find answers to the most frequently asked questions about NFRC and the NFRC Label.
- * Send you questions about window energy performance to experts at NFRC.
